Dear Hiring Team,

I'm a seasoned software architect and developer with over 20 years of hands-on experience building robust, scalable systems across a wide range of domains and technologies. I'm currently exploring senior engineering opportunities where I can contribute deep technical expertise, mentor teams, and help deliver impactful solutions.

My background includes designing and implementing full-stack and backend systems using Python (Flask, Django, FastAPI), Go (Gin, Chi), JavaScript/TypeScript (Angular, Vue, React), Rust, C#, and Java. I've built developer-facing SDKs and APIs, SAAS platforms, architected cloud-native applications (AWS, GCP, Azure), and led initiatives involving observability, distributed systems, MedTech, NLP, and graph technologies. I enjoy working in lean, high-trust teams where I can contribute across the stack, communicate effectively, provide robust solutions, and focus on impact over ceremony.

If my background aligns with your needs, I'd love to connect.
